Continuation of Item 5 of Advisory

Applicant argues that that switch 137 of Morrison is not coupled to a plurality of media devices and a presentation device for transmitting a selected one of the media signals to the presentation device but rather performs an entirely different function. The examiner notes that claim 28 recites the limitation "a switch for transmitting a selected one of a plurality of media signals to said output device in response to said selection command". As stated in the previous Office Action, the video switch 137 performs this function. The argument stated by the applicant discusses limitations that are not found in claim 28, such as the switch being coupled to a plurality of media devices and a presentation device. Claim 28 provides no discussion of how modules are connected to one another only the function of each component; therefore, the argument is moot.

Applicant further states that the motivation to make the modification of the switch 137 in Morrison does not follow the teachings of Morrison. Clearly the switch transmits a selected one of a plurality (RF IN and Video IN) of media signals to said output device (TV) in response to said selection command (see Figure 3 and the rejection made in the previous Office Action) and the motivation to use a switch over a bus would be to avoid possible conflicts between devices. Morrison's video switch 137 does more than simply processing the closed caption data by also accepting input signals from multiple inputs (RF IN and Video input in Figure 3). Therefore, the examiner's motivation for combining Williams and Morrison follows the actual teachings of selecting one input signal at a time.
